Dear Jerry:

This letter serves as a follow-up to the conversations between you and Dr. Dan Petersen of Environmental Resources Management-North Central, Inc. (ERM-North Central) on October 30 and October 31, 1996. You and Dr. Petersen discussed which were the correct analytical data to be used for the Lenz Oil Feasibility Study. Based on that discussion, the data to be used for the Feasibility Study include the soil and sediment data in the validation reports attached as Appendices M and N to the Remedial Investigation report with the following exceptions:

- Phase I inorganics for sediments, soil borings, and surface soils from Technical Memorandum 3B, dated January 15, 1992, for all inorganic analytes;
- Phase II semivolatile and pesticides/polychlorinated biphenyls for the samples collected from soil boring SB-19:
  - The samples LOSB19AS and LOSB19AD were collected from 5 to 10 feet deep below and *not* from 0 to 5 feet deep as shown in some tables of Appendix N of the Remedial Investigation report; and
  - The sample LOSB19BS was collected from 10 to 11.5 feet deep *not* 5 to 10 feet deep as shown in some tables of Appendix N of the Remedial Investigation report.

Jerry Willman  
Illinois Environmental Protection Agency

We appreciate your help in this matter.

Very truly yours,

**ERM-NORTH CENTRAL, INC.**
